DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed September 18, 2006 are acknowledged.
2. Examiner acknowledges amended claims 1, 9, 13, 20 and 24.
3. The rejection of claim 12 under 35 U.S.C. 112, second paragraph is overcome by applicant's amendment.
4. The rejection of claims 9-10, 12 and 15-17 under 35 U.S. C. 102(b) as being anticipated by JP 05-112509 is overcome by applicant's amendment.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
6. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 16 is not commensurate in scope with claim 9 from which it depends. Claim 16 recites R³. There is no R³ for formula (III) in claim 9.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 9, 12-13, 15, 17 and 20-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Tamano et al., U.S. Patent Number 5,681,664.

Tamano discloses hole transporting materials that can be used in an organic electroluminescent device or electrophotographic photoreceptor (see column 1, lines 5-12). The reference discloses a hole transporting material such as

The hole transporting material of the Tamano reference reads on the instant claims when R² is hydrogen; R¹ is aryl; E is oxygen and n is 1. It is disclosed in column 3, lines 55-57 that the light emitting layer can comprise the hole transporting material.

9. Claims 1, 5-8 and 20-25 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2000-143786.

The Japanese reference discloses charge transporting material used for an organic electronic device. The Japanese reference discloses a charge transporting material such as

Art Unit: 1774

The reference reads on the instant claims when R^2 is an arylamino group

E is (CR^5R^6) with R^5 and R^6 both being hydrogen and m is 2; R^3 is a phenyl group and n is 1.

Double Patenting

10. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v.*

Art Unit: 1774

Eagle Mfg. Co., 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

11. Claims 1-23 and 25 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-7 and 9 of copending Application No. 11/093,455. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. Both applications recite a compound and composition that can be used in an electronic device having either formula (I) or formula (III)

Art Unit: 1774

wherein n is an integer of at least 1;

R^1 is selected from aryl, heteroaryl, fluoroaryl, and fluoroheteroaryl;

R^3 is selected from H and R^1 ;

R^2 is selected from H, R^1 , alkyl, fluoroalkyl, Cl, Br, I and an arylamino group of Formula (II)

wherein R^4 is selected from aryl, H, R^1 , alkyl, and fluoroalkyl;

R^7 is selected from aryl, heteroaryl, fluoroaryl, and fluoroheteroaryl; and

E is selected from O, S, $(SiR^5R^6)_m$ wherein m is an integer of 1 to 20, and combinations thereof,

wherein R^5 and R^6 are independently selected from H, F, alkyl, aryl, alkoxy, aryloxy, fluoroalkyl, fluoroaryl, fluoroalkoxy, and fluoroaryloxy, and wherein R^5 and R^6 can be taken together to form a ring.

Response to Arguments

12. Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.
